

Build AI agents your enterprise can trust. Secured, governed and measured from day one.

Most platforms help you build agents and leave security, oversight and ROI for later. Evolvable.ai is the sovereign AI agent platform where they ship in the box. Build on the systems you already run, use any model you choose, and deploy it all on your own infrastructure.

"Onboard Acme Trading as a vendor."

One request in Teams. ERP, CRM and email updated, one approval, no data leaving your estate.

WHAT YOU GET *Nine modules. One platform.*

Agent Studio

Agents and agent teams that hand work to each other. No code needed.

Sub-agents · Skills · Conversation flows · Playground

Workflows

Turn a process into a flow that runs on a schedule, a webhook or an inbox.

80 node types · Approval steps · Triggers

Knowledge & Memory

Ground every answer in your documents, databases and past conversations.

Vector + knowledge-graph retrieval

AI Security

Find shadow AI and screen every prompt and response before it does harm.

Evolvable Edge · AI Firewall · 60+ detectors

AI Governance

Decide what each agent may do and where a person signs off.

Risk register · Approval gates · Versioning

Observability & ROI

See what every agent did, what it cost and what it returned.

Traces · Quality KPIs · ROI by business unit

Model Intelligence

Recommends a model for each agent, then routes every request to the best fit.

Recommendation · Dynamic routing · Budgets

Specialist Models

Search, vision, speech, image and decision models, used in agents, workflows or via API.

OCR · Object detection · Speech · Image generation

AI Risk & Compliance

Register every AI system, on any platform, and prove compliance with live evidence.

EU AI Act · ISO 42001 · DIFC Reg. 10 · Audit pack

100⁺

native tools and MCP connectors, incl. 55+ security tools

80

workflow node types, from email to approvals to code

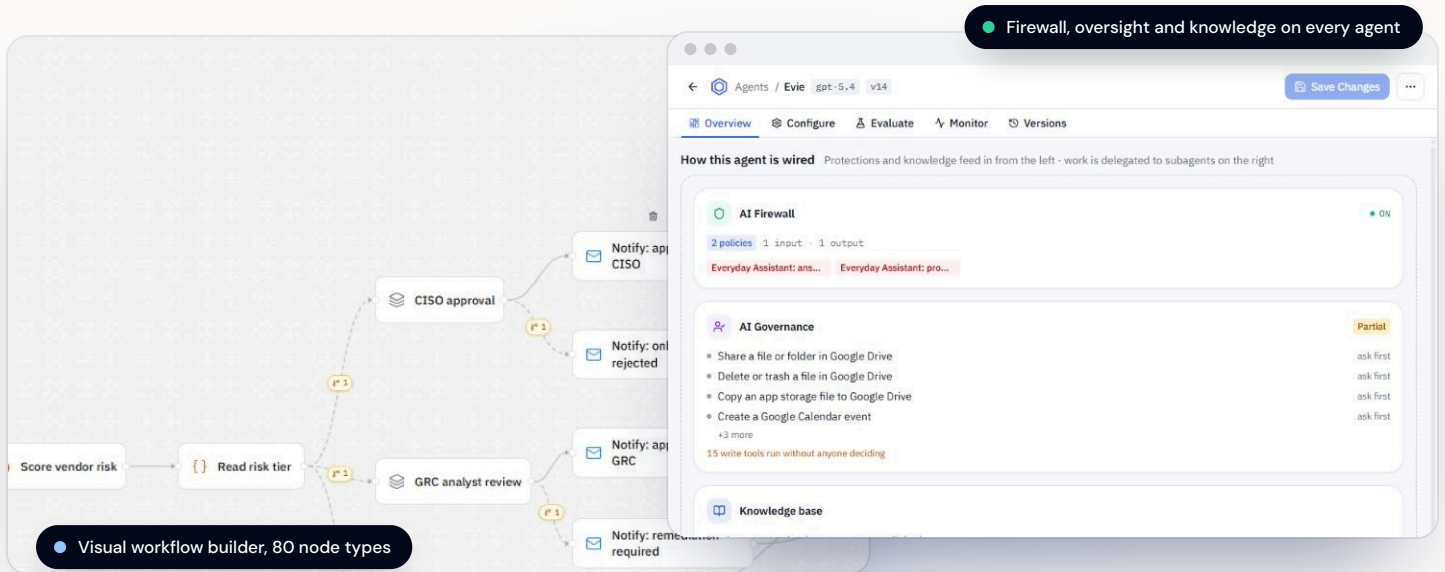

Any model

recommended per agent, routed per request

60⁺

AI firewall detectors, incl. Arabic text and national IDs

Build agents *on what you already run.*

PROVEN IN PRODUCTION Running today, *across industries.*

10 · 48

agents and use cases at a **UAE sovereign technology group**, across security, procurement and finance

CLIENT NAMES WITHHELD.

4 h → 8 min

to produce threat advisories on a **global exposure management platform**

45 → 5 min

per procurement document at a **US luxury manufacturer & distributor**

85%

of invoices processed straight through on a **UAE digital real-estate platform**

HOW YOU ENGAGE

01

Deploy the platform

The full platform, deployed in your environment. You bring your own LLM accounts, so model usage is billed to you with no mark-up.

02

Build with forward deployed engineers

Our team designs, builds and ships your first agents and integrations, as fixed-scope sprints or a managed programme.

03

Run and improve

Optional support: SLA-backed incident response, quarterly agent performance reviews, prompt and platform updates.

TECHNICAL AT A GLANCE

Deployment	Your cloud, private cloud, on-premises or air-gapped. Tenant isolation built in.	Channels	Web app, widget, Teams, Slack, WhatsApp, email, voice and an OpenAI-compatible API.
Models	OpenAI, Azure OpenAI, Anthropic, Google Gemini and open-weight models. Recommended per agent, routed per request by reasoning need, cost and data policy.	Security	Role-based access, key vault, tenant and API keys with rotation, redacted request logs.
Integrations	100+ native tools plus any MCP server or REST API: Microsoft 365, Google Workspace, ERP, CRM, HR, ITSM, security tools and databases.	Governance	AI firewall, approval gates, versioning, evals, a full audit trail, and compliance posture against EU AI Act, ISO 42001 and DIFC Reg. 10.
Specialist models	Document search, OCR and object detection, speech-to-text, text-to-speech, image generation and decision models, as tools, workflow steps or APIs.	Inventory	One register for Evolvable agents and agents pulled in from other platforms, with owner, model, data and status.
Knowledge	Documents, structured databases and memory, with semantic and knowledge-graph retrieval.	Languages	Agents work in Arabic, English and the language of your choice.

What will your first agent be?
See it live in 45 minutes.

Bring one real process. We connect it, run it under your policies and show you the trace, the controls and the ROI.
