

Deliver AI projects in weeks. Reuse them across every client.

Evolvable.ai is the enterprise AI agent platform system integrators build on. Stop rebuilding infrastructure, retrieval, security and governance for every client. Build agents and agentic workflows on one platform, deploy them on each client's infrastructure, and reuse what you build across industries.

NOT JUST AN AGENT BUILDER A complete AI platform your practice can stand on.

Agents & agent teams

Multi-agent orchestration: sub-agents, agent-to-agent calls, parallel fan-out, 80-node agentic workflows with approval and decision steps.

Dual RAG

Vector search plus a knowledge graph, plus read-only SQL over structured data. Answers grounded in documents, relations and numbers.

AI-assisted building

The Evolvable Builder agent creates agents from a description. A builder MCP API lets any MCP-capable AI assistant build on a tenant.

AI security

AI firewall with 60+ detectors on every prompt and response. Shadow AI discovery across the workforce with Evolvable Edge.

Governance

Five human-oversight modes, risk register, approver SLAs, and versioning that shows the whole fleet as of any date.

Observability & ROI

End-to-end traces, evals before go-live, quality KPIs, and ROI by business unit that proves value at every renewal.

4x

faster to first go-live than a custom build

8

go-lives in the time of one custom build, reusing templates

2

retrieval engines in one: vector + knowledge graph

60⁺

AI firewall detectors, incl. Arabic

What your clients *will ask you to build.*

Every industry, every function: one platform underneath. Examples partners deliver with agents and agentic workflows:

Banking & finance

- KYC & onboarding
- Credit memo drafting
- Fraud alert triage

Government

- Citizen service agents
- Policy & regulation Q&A
- Correspondence handling

Healthcare

- Prior authorisation
- Claims checks
- Clinical document summaries

Retail & e-commerce

- Customer service 24/7
- Product content at scale
- Returns & refunds

Real estate

- Lease abstraction
- Tenant service desk
- Sales lead qualification

Energy & utilities

- Field reports & permits
- Asset maintenance logs
- HSE incident analysis

Logistics & supply chain

- Shipment exceptions
- Customs documents
- Carrier invoice audit

Manufacturing

- Quality reports
- Supplier onboarding
- Maintenance knowledge

ACROSS EVERY FUNCTION

Finance

HR

Procurement

Customer service

Sales

IT operations

Cybersecurity

Legal & compliance

Operations

FOUR REVENUE STREAMS ON EVERY CLIENT

01 Platform licences

Resell or refer flat annual licences with unlimited users. Recurring revenue on every account.

Professional to Sovereign tiers

02 Implementation

Design and build agents and workflows. Templates make the second client faster than the first.

Fixed-price use cases

Integration projects

03 Add-on modules

Upsell what every client needs once agents are live.

AI Security & Shadow AI

Governance & compliance

Observability & ROI

04 Managed operations

Run, monitor and improve agents for clients, with ROI reports for every QBR.

Agent operations

Support & SLAs

PROVEN AT SCALE

"A UAE sovereign technology group is rolling out 10 agents across 48 use cases in security operations, procurement, finance and IT, on one platform."

CUSTOMER STORY · ANONYMISED · DELIVERED WITH AN SI PARTNER

WHY YOUR CLIENTS SAY YES

Sovereign

Runs on their infrastructure, air-gapped if needed

Governed

Firewall, approvals and audit pass security review

Any model

Their LLM accounts, cloud or local, per agent

Predictable

Flat annual licence, unlimited users

WHAT YOU GET AS A PARTNER

Template marketplace

Ready agents, workflows, guardrails and skills to adapt and resell

AI-assisted building

Builder agent and builder MCP API cut build time for your consultants

Sandbox & demo tenants

Your own environments for demos, POCs and enablement

Co-selling & engineering

Joint pre-sales, RFP support and platform engineers on complex builds

Bring us your next AI opportunity. We'll help you win and deliver it.

Start with a sandbox tenant and one live client use case. Deploy on the client's infrastructure, with any model they choose.
